Olinaka,

This email is to follow up with you on our meeting last week in Washington, DC where you raised concerns about the Lane Plating Superfund site which is near your neighborhood.

I had a conversation regarding Lane Plating with our Region 6/Dallas Superfund program office late last week.

From that conversation, I learned that there was a Dallas city councilman's meeting on Thursday the 7<sup>th</sup> where there were representatives from EPA, TCEQ, and city of Dallas staff who discussed community concerns. This included the status of the EPA remedial investigation and the community involvement activities at the site. I understand that you attended the meeting as well.

I learned that EPA is planning on starting remedial sampling in May 2019 and plans to provide the results to the community, city, and state within 60 days after completion of the sampling. This is a typical turnaround time for us. (Not the 6 months that was mentioned in that meeting.) Once we finishing scoping out the extent of the sampling, we should be able to provide more definitive timeframes.

Also, there is fencing around the site with a locked access gate, but you are correct in that the signage does not identify the property as a federal Superfund site. The Region is working to provide that signage.

As usual if EPA finds any sampling results that warrant an immediate Superfund removal response, the Region will undertake those. As you know the Region has already undertaken one such action at the site.

I also understand that one of our Region 6 Superfund managers, John Meyer, had conversations with you at the Thursday meeting. Hopefully, he was able to answer any questions that you had. John did provide me contacts that you should feel free to reach to if you have further questions:

Ken Shewmake, Remedial Project Manager (RPM)
